

## MULTI-TREATMENT PRODUCT FOR HOT WATER AND STEAM HEATING BOILERS AND OTHER CLOSED WATER SYSTEMS

- Emulsifies and cleans away rust, corrosion deposits and sludge
- Inhibits system corrosion, foaming and surging
- Inhibits lime scale
- Buffers and balances water conditions
- Typical use is one quart per 25 gallons of system water

### Description

System heating boilers can be troubled with water related problems such as scale formation, sludge and corrosion, which in turn can lead to other troublesome situations like foaming and surging. Proper treatment with a product like Winter-Treat can prevent these problems, enabling the steam boiler to perform at its designed capacity. Winter-Treat will buffer and balance water conditions, preventing both scale and corrosion while keeping the boiler free of sludge. Winter-Treat is a true multipurpose treatment.

### Application

Closed systems such as hot water heating boilers and even closed chilled water systems are easily plagued with corrosion problems in the absence of treatment. Winter-Treat contains all the necessary ingredients to buffer the water's pH and balance, passivating the metal surfaces and inhibiting corrosion.

In addition to all its preventative abilities, Winter-Treat also cleans boilers that are already fouled with deposits and corrosion. If Winter Treat becomes slushy dump the liquid into the system, fill bottle with warm water and shake to get the crystals to dissolve. Then add to the system.
